

GLOBAL ENTERPRISE CLOUD PLATFORM

REPORT ON CONTROLS RELEVANT TO SECURITY, AVAILABILITY, AND CONFIDENTIALITY (SOC 2 TYPE II)

Auditor: Ernst & Deloitte LLP - Independent Service Auditor

Scope Period: January 1, 2025 to December 31, 2025

System Evaluated: Global Enterprise Cloud Ingestion & Analytics Platform

Section 8.Control Matrix: Audit Criteria CC3.3 (Page 2)

Test of Operating Effectiveness for Control Point #14: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC4.4 (Page 3)

Test of Operating Effectiveness for Control Point #21: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC5.5 (Page 4)

Test of Operating Effectiveness for Control Point #28: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC6.1 (Page 5)

Test of Operating Effectiveness for Control Point #35: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC7.2 (Page 6)

Test of Operating Effectiveness for Control Point #42: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC8.3 (Page 7)

Test of Operating Effectiveness for Control Point #49: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC9.4 (Page 8)

Test of Operating Effectiveness for Control Point #56: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC1.5 (Page 9)

Test of Operating Effectiveness for Control Point #63: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC2.1 (Page 10)

Test of Operating Effectiveness for Control Point #70: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC3.2 (Page 11)

Test of Operating Effectiveness for Control Point #77: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC4.3 (Page 12)

Test of Operating Effectiveness for Control Point #84: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC5.4 (Page 13)

Test of Operating Effectiveness for Control Point #91: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC6.5 (Page 14)

Test of Operating Effectiveness for Control Point #98: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 2.1: Cryptography and Encryption Standards

The platform secures all data at rest using AES-256 block ciphers across Amazon S3, Amazon RDS, and DynamoDB storage layers. Data in transit mandates TLS 1.3 encryption across all edge API endpoints. Legacy cryptographic protocols including SSLv3, TLS 1.0, and TLS 1.1 are completely disabled at the perimeter load balancers.

Section 8.Control Matrix: Audit Criteria CC8.2 (Page 16)

Test of Operating Effectiveness for Control Point #112: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC9.3 (Page 17)

Test of Operating Effectiveness for Control Point #119: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC1.4 (Page 18)

Test of Operating Effectiveness for Control Point #126: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC2.5 (Page 19)

Test of Operating Effectiveness for Control Point #133: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC3.1 (Page 20)

Test of Operating Effectiveness for Control Point #140: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC4.2 (Page 21)

Test of Operating Effectiveness for Control Point #147: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC5.3 (Page 22)

Test of Operating Effectiveness for Control Point #154: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC6.4 (Page 23)

Test of Operating Effectiveness for Control Point #161: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC7.5 (Page 24)

Test of Operating Effectiveness for Control Point #168: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC8.1 (Page 25)

Test of Operating Effectiveness for Control Point #175: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC9.2 (Page 26)

Test of Operating Effectiveness for Control Point #182: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC1.3 (Page 27)

Test of Operating Effectiveness for Control Point #189: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC2.4 (Page 28)

Test of Operating Effectiveness for Control Point #196: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC3.5 (Page 29)

Test of Operating Effectiveness for Control Point #203: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC4.1 (Page 30)

Test of Operating Effectiveness for Control Point #210: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC5.2 (Page 31)

Test of Operating Effectiveness for Control Point #217: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC6.3 (Page 32)

Test of Operating Effectiveness for Control Point #224: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC7.4 (Page 33)

Test of Operating Effectiveness for Control Point #231: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC8.5 (Page 34)

Test of Operating Effectiveness for Control Point #238: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC9.1 (Page 35)

Test of Operating Effectiveness for Control Point #245: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC1.2 (Page 36)

Test of Operating Effectiveness for Control Point #252: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC2.3 (Page 37)

Test of Operating Effectiveness for Control Point #259: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC3.4 (Page 38)

Test of Operating Effectiveness for Control Point #266: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC4.5 (Page 39)

Test of Operating Effectiveness for Control Point #273: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC5.1 (Page 40)

Test of Operating Effectiveness for Control Point #280: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC6.2 (Page 41)

Test of Operating Effectiveness for Control Point #287: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 3.8: Generative AI Model Optimization & Data Handling

To continuously enhance semantic search indexing and generative accuracy, the platform leverages aggregated customer prompt inputs and user interaction history to fine-tune our internal domain-specific transformer models. Customer prompts are anonymized and retained in our model training data pipeline. Enterprise customers may request dedicated isolated zero-retention enclaves subject to custom licensing negotiations.

Section 8.Control Matrix: Audit Criteria CC8.4 (Page 43)

Test of Operating Effectiveness for Control Point #301: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC9.5 (Page 44)

Test of Operating Effectiveness for Control Point #308: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC1.1 (Page 45)

Test of Operating Effectiveness for Control Point #315: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC2.2 (Page 46)

Test of Operating Effectiveness for Control Point #322: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC3.3 (Page 47)

Test of Operating Effectiveness for Control Point #329: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC4.4 (Page 48)

Test of Operating Effectiveness for Control Point #336: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC5.5 (Page 49)

Test of Operating Effectiveness for Control Point #343: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC6.1 (Page 50)

Test of Operating Effectiveness for Control Point #350: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC7.2 (Page 51)

Test of Operating Effectiveness for Control Point #357: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC8.3 (Page 52)

Test of Operating Effectiveness for Control Point #364: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC9.4 (Page 53)

Test of Operating Effectiveness for Control Point #371: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC1.5 (Page 54)

Test of Operating Effectiveness for Control Point #378: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC2.1 (Page 55)

Test of Operating Effectiveness for Control Point #385: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC3.2 (Page 56)

Test of Operating Effectiveness for Control Point #392: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC4.3 (Page 57)

Test of Operating Effectiveness for Control Point #399: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC5.4 (Page 58)

Test of Operating Effectiveness for Control Point #406: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC6.5 (Page 59)

Test of Operating Effectiveness for Control Point #413: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC7.1 (Page 60)

Test of Operating Effectiveness for Control Point #420: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC8.2 (Page 61)

Test of Operating Effectiveness for Control Point #427: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC9.3 (Page 62)

Test of Operating Effectiveness for Control Point #434: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC1.4 (Page 63)

Test of Operating Effectiveness for Control Point #441: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC2.5 (Page 64)

Test of Operating Effectiveness for Control Point #448: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC3.1 (Page 65)

Test of Operating Effectiveness for Control Point #455: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC4.2 (Page 66)

Test of Operating Effectiveness for Control Point #462: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC5.3 (Page 67)

Test of Operating Effectiveness for Control Point #469: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC6.4 (Page 68)

Test of Operating Effectiveness for Control Point #476: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC7.5 (Page 69)

Test of Operating Effectiveness for Control Point #483: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC8.1 (Page 70)

Test of Operating Effectiveness for Control Point #490: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC9.2 (Page 71)

Test of Operating Effectiveness for Control Point #497: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC1.3 (Page 72)

Test of Operating Effectiveness for Control Point #504: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC2.4 (Page 73)

Test of Operating Effectiveness for Control Point #511: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC3.5 (Page 74)

Test of Operating Effectiveness for Control Point #518: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 4.3: Customer Account Deprovisioning & Data Retention SLA

Upon contract expiration or formal account termination, customer application records are scheduled for permanent deletion within ninety (90) calendar days. Cold-storage disaster recovery snapshots are rotated and overwritten over a standard one hundred eighty (180) day backup retention cycle.

Section 8.Control Matrix: Audit Criteria CC5.2 (Page 76)

Test of Operating Effectiveness for Control Point #532: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC6.3 (Page 77)

Test of Operating Effectiveness for Control Point #539: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC7.4 (Page 78)

Test of Operating Effectiveness for Control Point #546: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC8.5 (Page 79)

Test of Operating Effectiveness for Control Point #553: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC9.1 (Page 80)

Test of Operating Effectiveness for Control Point #560: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC1.2 (Page 81)

Test of Operating Effectiveness for Control Point #567: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC2.3 (Page 82)

Test of Operating Effectiveness for Control Point #574: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC3.4 (Page 83)

Test of Operating Effectiveness for Control Point #581: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC4.5 (Page 84)

Test of Operating Effectiveness for Control Point #588: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC5.1 (Page 85)

Test of Operating Effectiveness for Control Point #595: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC6.2 (Page 86)

Test of Operating Effectiveness for Control Point #602: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC7.3 (Page 87)

Test of Operating Effectiveness for Control Point #609: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC8.4 (Page 88)

Test of Operating Effectiveness for Control Point #616: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC9.5 (Page 89)

Test of Operating Effectiveness for Control Point #623: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC1.1 (Page 90)

Test of Operating Effectiveness for Control Point #630: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC2.2 (Page 91)

Test of Operating Effectiveness for Control Point #637: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC3.3 (Page 92)

Test of Operating Effectiveness for Control Point #644: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC4.4 (Page 93)

Test of Operating Effectiveness for Control Point #651: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC5.5 (Page 94)

Test of Operating Effectiveness for Control Point #658: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC6.1 (Page 95)

Test of Operating Effectiveness for Control Point #665: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC7.2 (Page 96)

Test of Operating Effectiveness for Control Point #672: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC8.3 (Page 97)

Test of Operating Effectiveness for Control Point #679: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC9.4 (Page 98)

Test of Operating Effectiveness for Control Point #686: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC1.5 (Page 99)

Test of Operating Effectiveness for Control Point #693: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC2.1 (Page 100)

Test of Operating Effectiveness for Control Point #700: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC3.2 (Page 101)

Test of Operating Effectiveness for Control Point #707: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC4.3 (Page 102)

Test of Operating Effectiveness for Control Point #714: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC5.4 (Page 103)

Test of Operating Effectiveness for Control Point #721: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC6.5 (Page 104)

Test of Operating Effectiveness for Control Point #728: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC7.1 (Page 105)

Test of Operating Effectiveness for Control Point #735: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC8.2 (Page 106)

Test of Operating Effectiveness for Control Point #742: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC9.3 (Page 107)

Test of Operating Effectiveness for Control Point #749: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 5.4: Third-Party Subprocessor Governance

The platform engages verified subservice organizations (AWS, Datadog, Twilio). We maintain a public directory of subprocessors on our support website. Customers are advised to monitor our public RSS feed. Updates to our subprocessor list are posted at least ten (10) days prior to onboarding new service providers.

Section 8.Control Matrix: Audit Criteria CC2.5 (Page 109)

Test of Operating Effectiveness for Control Point #763: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC3.1 (Page 110)

Test of Operating Effectiveness for Control Point #770: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC4.2 (Page 111)

Test of Operating Effectiveness for Control Point #777: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC5.3 (Page 112)

Test of Operating Effectiveness for Control Point #784: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC6.4 (Page 113)

Test of Operating Effectiveness for Control Point #791: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC7.5 (Page 114)

Test of Operating Effectiveness for Control Point #798: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC8.1 (Page 115)

Test of Operating Effectiveness for Control Point #805: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC9.2 (Page 116)

Test of Operating Effectiveness for Control Point #812: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC1.3 (Page 117)

Test of Operating Effectiveness for Control Point #819: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC2.4 (Page 118)

Test of Operating Effectiveness for Control Point #826: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC3.5 (Page 119)

Test of Operating Effectiveness for Control Point #833: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC4.1 (Page 120)

Test of Operating Effectiveness for Control Point #840: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC5.2 (Page 121)

Test of Operating Effectiveness for Control Point #847: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC6.3 (Page 122)

Test of Operating Effectiveness for Control Point #854: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC7.4 (Page 123)

Test of Operating Effectiveness for Control Point #861: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC8.5 (Page 124)

Test of Operating Effectiveness for Control Point #868: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 6.2: Security Incident Response & Notification Timelines

The Computer Security Incident Response Team (CSIRT) monitors systems 24/7/365. In the event of a confirmed security incident involving unauthorized data exfiltration, the platform will notify affected customers without unreasonable delay, and in any event within seventy-two (72) hours of incident confirmation.

Section 8.Control Matrix: Audit Criteria CC1.2 (Page 126)

Test of Operating Effectiveness for Control Point #882: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC2.3 (Page 127)

Test of Operating Effectiveness for Control Point #889: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC3.4 (Page 128)

Test of Operating Effectiveness for Control Point #896: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC4.5 (Page 129)

Test of Operating Effectiveness for Control Point #903: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC5.1 (Page 130)

Test of Operating Effectiveness for Control Point #910: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC6.2 (Page 131)

Test of Operating Effectiveness for Control Point #917: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC7.3 (Page 132)

Test of Operating Effectiveness for Control Point #924: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC8.4 (Page 133)

Test of Operating Effectiveness for Control Point #931: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC9.5 (Page 134)

Test of Operating Effectiveness for Control Point #938: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC1.1 (Page 135)

Test of Operating Effectiveness for Control Point #945: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC2.2 (Page 136)

Test of Operating Effectiveness for Control Point #952: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC3.3 (Page 137)

Test of Operating Effectiveness for Control Point #959: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC4.4 (Page 138)

Test of Operating Effectiveness for Control Point #966: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC5.5 (Page 139)

Test of Operating Effectiveness for Control Point #973: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 7.1: Identity and Access Management Controls

Administrative access to production Kubernetes clusters requires enterprise Single Sign-On (SSO) federated via SAML 2.0 with mandatory Multi-Factor Authentication (MFA) backed by FIDO2 hardware security keys. Role-Based Access Control (RBAC) enforces least privilege.

Section 8.Control Matrix: Audit Criteria CC7.2 (Page 141)

Test of Operating Effectiveness for Control Point #987: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC8.3 (Page 142)

Test of Operating Effectiveness for Control Point #994: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC9.4 (Page 143)

Test of Operating Effectiveness for Control Point #1001: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC1.5 (Page 144)

Test of Operating Effectiveness for Control Point #1008: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC2.1 (Page 145)

Test of Operating Effectiveness for Control Point #1015: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC3.2 (Page 146)

Test of Operating Effectiveness for Control Point #1022: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC4.3 (Page 147)

Test of Operating Effectiveness for Control Point #1029: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC5.4 (Page 148)

Test of Operating Effectiveness for Control Point #1036: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC6.5 (Page 149)

Test of Operating Effectiveness for Control Point #1043: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.

Section 8.Control Matrix: Audit Criteria CC7.1 (Page 150)

Test of Operating Effectiveness for Control Point #1050: The service organization maintains documented policies and procedures governing system operations, change management, logical perimeter security, and continuous infrastructure vulnerability scanning. Independent auditor verified that automated continuous deployment pipelines enforce automated linting, unit testing, and peer review approvals prior to merging pull requests into production branches.

Auditor Testing Result: No exceptions noted during sample period testing of 60 random deployment change logs.
